

I support satellite radio having Traffic and Weather reports. This is an important issue because it is about public safety. Satellite radio listeners (over 2 million and growing) deserve access to traffic and weather reports because this information makes these citizens safer. The NAB opposes satellite radio on this issue for commercial business, and political reasons only. They do not care about public safety. The more traffic and weather reports that are issued the safer the public will be. Please do not let politics and business interests influence your decision on this matter. Keep the public safe. Allow satellite radio to broadcast these service and safety announcements on traffic and weather. Thank you
